

Course Summary and COSC 404

COSC 304 – Introduction to Database Systems

Course Summary

The COSC 304 course goal was to:

Become an expert database user with the ability to query existing databases using SQL, design new databases using UML, and write programs that use databases.

High-demand skills acquired:

- Querying: SQL, relational algebra
- Database design: ER, UML
- Programming: Java, JDBC, PHP, Python, HTML, JavaScript, JSON, XML, XPath
- DevOps: Docker, installing databases and web servers, MySQL, SQL Server, Tomcat
- Database skills make you more marketable and allow you to construct more sophisticated systems.
- All these skills practiced during the lab assignments and project.

Survey Question: Lecture Value

Question: On a scale of 1 to 5 with 5 being the highest, how valuable/useful was the lecture time?

A) 1

B) 2

C) 3

D) 4

E) 5

Survey Question: Assignment Value

Question: On a scale of 1 to 5 with 5 being the highest, how valuable/useful were the lab assignments?

A) 1

B) 2

C) 3

D) 4

E) 5

Survey Question: Virtual Lab Attendance

Question: On a scale of 1 to 5 with 5 being the highest, how often did you attend the virtual help sessions?

- A)** Never
- B)** A few times during the semester
- C)** About every 2nd week
- D)** Almost every week
- E)** Every week

Survey Question: Lab Replacement

Question: On a scale of 1 to 5 with 5 being the highest, what was your opinion of having a virtual/physical help desk with drop-in hours rather than scheduled labs?

- A)** Strongly Disagree
- B)** Disagree
- C)** Neutral
- D)** Agree
- E)** Strongly Agree

Survey Question: Workload

Question: On a scale of 1 to 5 with 1 being very low and 5 being very high, how was the overall workload compared to other courses and your expectations?

A) 1

B) 2

C) 3

D) 4

E) 5

Survey Question: Online Questions

Question: On a scale of 1 to 5 with 5 being the highest, how valuable/useful were the online questions used in the course?

A) 1

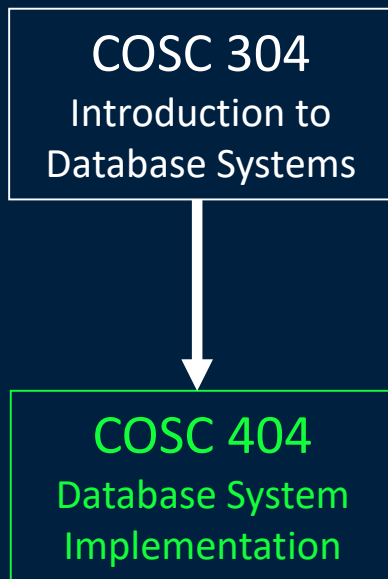

B) 2

C) 3

D) 4

E) 5

COSC 304 vs. COSC 404

Database Design and Programming

- Data models - ER, relational, XML, JSON
- Query languages - SQL, relational algebra
- Design project, Docker, MySQL/SQL Server
- Database skills and techniques as a user
- How to use a DBMS ; how to build a database

Database System Implementation

- Storage and index structures
- Transaction management, concurrency control
- Query processing, recovery and reliability
- How to build a DBMS
- Non-relational (NoSQL) systems/architectures
- How to select a DBMS
- Docker, MongoDB, PostgreSQL, testing

COSC 404 Course Goals

COSC 404 is about how a database works (the "**black box**").

- Inside is storage, indexing, query processing/optimization, transactions, concurrency, recovery, distribution, lots of stuff!

Goals:

- 1) Be a better, "expert" user of database systems.
- 2) Be able to use and compare different database systems.
- 3) Adapt the techniques when developing your own software.

You will gain **lots** of industrial experience using a variety of databases and become a better, more experienced developer.

- MySQL, PostgreSQL, Microsoft SQL Server, MongoDB, JUnit, Snowflake, Java, JDBC, javacc, JSON, Map-Reduce, SQL, Docker

Thank you for a great course!

Good luck on the exam!
